Projects

E-Study Notes   *Node.js, Express.js, MongoDB*
COLLECTION OF NOTES FOR STUDENTS   Github

- It is a full stack development. The notes are indeed coming from the server side. The server determine which view to render based on the URL requested by the client.
- The router handles the request and renders the template. On the client side, when a user clicks on the links, it sends a request to the respective route.
- The server processes these requests, renders the appropriate templates, and sends the resulting HTML back to the client.
- Login/Signup Validations Error are provided by using express js.

e-study-notes.onrender.com/

Music-Playlist   *JavaScript*
PLAYING SONG AND PLAYLIST   Github

- Songs and album information are fetched dynamically using `fetch` and updated in the UI without refreshing the page.
- Event listeners are used extensively to control playback, navigate through songs, adjust volume, and interact with UI elements.
- Various UI elements (playlist, song info, time display, volume control) are updated based on user interactions and song playback events.
